Dear Hiring Committee,

I saw the job post on **Amazon Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer** on the **Amazon Leo Optical Inter-Satellite Link** team at **Amazon**. With hands on experience in C/C++, Linux systems, and building fault-tolerant infrastructure on AWS, I am excited about the opportunity to contribute to Amazon Leo and support reliable, autonomous satellite software delivery.

Here are reasons that make me a great fit for the role:

- **Embedded and low-level systems experience:** My coursework and personal projects are grounded in C/C++, and at Siemens I diagnosed live infrastructure faults across Linux, EC2, and databases during 44 production environment upgrades in 4 months, building the debugging discipline needed for low-level driver and real-time system work.

- **Fault-tolerant, redundant systems design:** I designed an Ansible-based Blue-Green deployment framework with automated rollback that reduced production upgrade downtime by 50%, enabling environment recovery without manual intervention, directly relevant to autonomous health monitoring and recovery.

- **Test, validation, and deployment infrastructure:** I built a Go and Terratest validation framework that caught 95% of misconfigurations pre-production, and migrated 40+ production environments to Kubernetes using ArgoCD and GitLab CI/CD, experience that maps closely to building safe over-the-air update pipelines across a fleet.

- **Cross-functional collaboration and ownership:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 engineers, reflecting the collaborative, full-lifecycle ownership this role calls for across hardware, optics, and operations teams.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Amazon Leo.

Please find my CV attached below. I look forward to hearing from you. Building software that helps commission optical links in orbit is a mission I would be proud to support.

Regards,
