Dear Hiring Committee,

I saw the job post on **Armada's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Armada**. With hands on experience building backend services, REST APIs, and microservices, and operating Docker and Kubernetes infrastructure in production, I am excited about the opportunity to contribute to Armada's mission of building infrastructure for sovereign and edge AI.

Here are reasons that make me a great fit for the role:

- **Backend services and microservices in production:** At Siemens Industry Software, I automated backend infrastructure workflows with Python (Boto3) and REST APIs, replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, while working within Agile/Scrum development cycles.

- **Containerization and orchestration with Docker and Kubernetes:** I migrated 40+ production environments from process-based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50%.

- **Cloud operations and datastores:** I have hands on experience with AWS (EC2, S3, Lambda), and have built and operated services backed by PostgreSQL, MySQL, and Redis, diagnosing live production issues across Linux, EC2, and database layers during 44 production upgrades in 4 months.

- **Delivery, quality, and observability:** I built CI/CD pipelines with GitLab CI/CD and Jenkins, monitored production services with CloudWatch and Datadog, and served as Quality Coach and SonarQube Specialist, raising automated test coverage from 35% to 78% through code review and CI/CD quality gates.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Armada's edge AI infrastructure platform.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the infrastructure layer bridging the digital divide for customers around the world.
