Dear Hiring Committee,

I saw the job post on the company careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **DevOps Engineer** at **Axon**. With hands on experience deploying and maintaining cloud native infrastructure, automating CI/CD pipelines, and operating high availability production systems, I am excited about the opportunity to contribute to **Axon** and support the team building real time orchestration for a total networking experience.

**Here are reasons that make me a great fit for the role:**

- **Highly available, fault tolerant systems at scale:** At Siemens Industry Software, I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and services without service interruption.

- **Docker, Kubernetes, and infrastructure as code:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and automated AWS resource provisioning with Terraform, cutting deployment time by 30%.

- **CI/CD pipelines and configuration management:** I designed an Ansible based Blue Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery, and built GitLab CI/CD pipelines across multiple environments.

- **Automation and scripting:** I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy Ruby scripts and reducing deployment time by 40% across AWS environments.

- **Quality, monitoring, and cross functional collaboration:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding.

I am available to work full time after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Axon's mission of improving the ISP customer experience.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the automation and reliability behind Axon's real time orchestration platform.
Regards,
