Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **Infrastructure Engineer** at **Chalk**. With hands on experience automating and provisioning cloud infrastructure with Python, Go, and Terraform, I am excited about the opportunity to contribute to Chalk's platform for orchestrating and deploying infrastructure across AWS and GCP.

**Here are reasons that make me a great fit for the role:**

- **4+ years automating infrastructure management:** At Siemens Industry Software, I automated Teamcenter X infrastructure provisioning workflows with Python and Boto3, replacing legacy Ruby scripts and cutting deployment time by 40 percent across AWS environments, and executed 44 production environment upgrades in 4 months.

- **Proficient in Python, Go, and Terraform:** As a Software Developer Intern, I automated AWS resource provisioning with Terraform, reducing deployment time by 30 percent, and built a Go and Terratest validation framework that caught 95 percent of misconfigurations before production.

- **Experience with AWS and GCP:** I migrated 40 or more production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and have hands on experience with Google Cloud Platform and Azure alongside AWS.

- **Collaboration across technical and non-technical teams:** I built a self-service developer platform adopted by 15 engineers and served as Quality Coach for the Agile Release Train, increasing automated code coverage from 35 to 78 percent while mentoring 5 software engineers through structured onboarding.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Chalk's mission of tearing down the complexity and scale barriers that constrain machine learning applications.

Please find my CV attached below. I look forward to hearing from you. Chalk's work building a data platform that powers fraud detection, identity verification, and clean energy systems is exactly the kind of high impact infrastructure problem I want to help solve.
