Dear Hiring Committee,

I saw the job post on the Chooch careers page and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Backend Software Engineer** at **Chooch**. With hands on experience building backend automation, production APIs, and reliable deployment systems, I am excited about the opportunity to contribute to **Chooch** and support its computer vision and LLM powered platform.

Here are reasons that make me a great fit for the role:

- **Backend engineering experience building production services:** At Siemens Industry Software, I built Python (Boto3) backend automation for Teamcenter X infrastructure services, replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments.

- **Python and clean, testable code:** I write production Python across backend services and ML pipelines, including a FastAPI backend serving real-time predictions from PostgreSQL and Redis for a taxi demand forecasting system I built over a 2.3M-row dataset.

- **Relational databases and SQL:** I designed and queried PostgreSQL-backed data layers for analytics workloads, including schema design and query optimization for the mobility forecasting system above.

- **Linux, debugging, and production troubleshooting:** I diagnosed and resolved live production incidents across 44 environment upgrades in 4 months, debugging Linux, EC2, databases, and networking issues, and designed an Ansible-based Blue-Green deployment framework that reduced production downtime by 50%.

- **Machine learning and computer vision integration:** My current graduate research builds a two-stage LLM pipeline integrating computer vision grounding for Android bug reproduction, achieving a 25.7x latency reduction over a GPT-4o and CLIP baseline while productionizing model inference.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Chooch's backend platform powering computer vision and LLM workflows.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the backend systems behind Chooch's computer vision platform.
