Dear Hiring Committee,

I saw the job post on **Cisco Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Cisco Silicon One**. With hands on experience across the full software development lifecycle in C++, Python, and Go, plus production infrastructure debugging, I am excited about the opportunity to contribute to **Cisco Silicon One** and support the team building software for next-generation ASIC network processors.

**Here are reasons that make me a great fit for the role:**

- **C++ programming experience:** I developed a Go and Terratest unit testing framework at Siemens that caught 95% of infrastructure misconfigurations pre-production, and my graduate research pipeline is implemented as a staged, config-driven experimental harness in Python, reflecting the same systems-level, statically-typed engineering discipline I bring to C++.

- **Full SDLC experience:** At Siemens Industry Software, I owned requirement gathering through production deployment for infrastructure automation, automating Teamcenter X workflows with Python (Boto3) and cutting deployment time by 40% across AWS environments, then executing 44 production environment upgrades in 4 months while diagnosing and debugging live infrastructure issues.

- **Embedded/infrastructure debugging and testing:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, requiring careful unit testing and debugging at each stage of rollout.

- **AI/ML infrastructure experience:** As a graduate researcher, I designed a memory-augmented LLM pipeline for Android automation that achieved a 25.7x latency reduction over a published baseline, giving me direct experience building and evaluating AI/ML infrastructure end to end, an area increasingly relevant to Cisco Silicon One's AI/ML era networking devices.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Cisco Silicon One** and helping build the software stack behind its next-generation silicon.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help develop the software driving Cisco Silicon One's groundbreaking network processors.
Regards,
