Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Python Engineer** at **Comcast**. With hands on experience building backend services, REST APIs, and agentic LLM workflows in Python, I am excited about the opportunity to contribute to **Comcast** and support the team building AI agents for customers and internal stakeholders.

Here are reasons that make me a great fit for the role:

- **Strong Python and backend service architecture experience:** At Siemens Industry Software, I wrote Python (Boto3) automation for Teamcenter X infrastructure workflows, replacing legacy Ruby scripts and cutting deployment time by 40 percent across AWS environments, while building and maintaining backend services and REST APIs.

- **Hands on experience with Git workflows and CI/CD pipelines:** I designed GitOps based CI/CD pipelines with GitLab CI/CD and ArgoCD and built an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50 percent, giving me practical fluency in version control and automated deployment practices.

- **Testing discipline and debugging complex systems:** As Quality Coach and SonarQube Specialist, I implemented pytest based automated testing that raised code coverage from 35 to 78 percent, and I debugged 44 production environment issues across Linux, EC2, databases, and backend services in four months.

- **Direct experience building AI agents and prompt engineering:** My graduate research builds an agentic LLM pipeline in Python with prompt engineering and tool-calling for Android bug reproduction, achieving a 25.7x latency improvement over a published baseline through iterative debugging of LLM outputs. I also designed a 17-tool MCP server exposing structured LLM tool-calling for an external healthcare AI agent.

- **Collaboration and Agile experience:** I participated in sprint planning and retrospectives within an Agile Release Train, and led code reviews while mentoring 5 software engineers, reflecting the growth mindset and collaborative practices this role values.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Comcast's AI agent initiatives.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build intelligent solutions that improve Comcast's customer and operational experiences.
Regards,
