Dear Hiring Committee,

I saw the job post on **Deloitte Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **Integration Engineer II** at **Deloitte**. With hands on experience building backend services, REST APIs, and cloud automation across the full software development lifecycle, I am excited about the opportunity to contribute to **Deloitte's AI & Engineering** team and support integration work across Test, UAT, and Production environments.

Here are reasons that make me a great fit for the role:

- **Backend services and API development in Python:** At Siemens Industry Software, I built and integrated REST APIs automating Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments.

- **Integration design connecting disparate systems across environments:** I executed 44 production environment upgrades in 4 months across Test, UAT, and Production, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and Teamcenter X services.

- **Cloud platform experience and full SDLC ownership:** I migrated 40+ production environments from process-based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, Amazon EFS, and HashiCorp Vault for secrets management, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%.

- **Technical documentation, mentoring, and stakeholder collaboration:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding and standardized development practices.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Deloitte** and helping design reliable, scalable integration solutions for its clients.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my backend and integration experience to a team helping clients modernize their technology platforms.
Regards,
