Dear Hiring Committee,

I saw the job post on the **Detroit Pistons** careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Intern** at the **Detroit Pistons**. With hands on experience building full stack web applications, automating backend workflows, and working across relational databases and cloud platforms, I am excited about the opportunity to contribute to the Pistons' internal Basketball Operations web application and support the coaching, scouting, analytics, and player personnel teams that rely on it.

Here are reasons that make me a great fit for the role:

- **Full-stack application development:** I built and deployed a full stack web application using React and MySQL for the Government of Maharashtra's Water Resource Department, digitizing departmental record management and improving operational efficiency by 40%. This gave me direct experience writing clean, maintainable JavaScript, HTML/CSS, and SQL end to end, and collaborating with non-technical stakeholders to gather requirements and ship features.

- **Object-oriented programming and adapting to new technologies quickly:** Across my coursework and roles I have written object-oriented code in Java, C#, and Python, and I regularly pick up new frameworks on the job, most recently automating AWS infrastructure with Python and Boto3 at Siemens Industry Software.

- **Working with databases and data pipelines:** I designed a PostgreSQL-backed REST API for my NYC Mobility Forecasting project, processing a 2.3M-row hourly demand dataset through a PySpark pipeline, which strengthened my comfort working with structured data pipelines similar to pgAdmin4 and Databricks workflows.

- **Debugging, testing, and deploying production systems:** At Siemens, I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases, and I served as Quality Coach and SonarQube Specialist, increasing automated code coverage from 35% to 78%.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to the Pistons' Basketball Operations technology team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the tools that support basketball decision-making for the Pistons organization.
Regards,
