Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **General Dynamics Information Technology**. With hands on experience building Python automation, web applications, and AWS cloud infrastructure, I am excited about the opportunity to contribute to GDIT and support the Tampa program's content, data, and analytics tooling.

Here are reasons that make me a great fit for the role:

- **Agile software development across the SDLC:** As Quality Coach on Siemens' Agile Release Train, I enforced CI/CD quality gates and coding standards across Agile teams, increasing automated code coverage from 35% to 78%, and coordinated work through Jira and structured onboarding.

- **Python automation and cloud engineering on AWS:** At Siemens, I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy scripts and cutting deployment time by 40% across AWS environments including EC2. I also built Terraform based AWS resource provisioning that reduced deployment time by 30%.

- **Web application and database experience:** I built a full-stack React and MySQL workflow application for the Government of Maharashtra that digitized record management and improved operational efficiency by 40%, and I regularly work with Django, Flask, and FastAPI for backend web development.

- **Reliable, scalable systems support:** I executed 44 production environment upgrades in four months, diagnosing live infrastructure issues across Linux, EC2, and databases, and designed a Blue-Green deployment framework that cut upgrade downtime by 50% while enabling reliable rollback.

- **Data pipeline and analytics tooling:** My graduate research and personal projects involve building data ingestion and evaluation pipelines in Python, including a two-stage LLM pipeline achieving a 25.7x latency reduction, translating directly to building tools for metrics, engagement tracking, and reporting workflows.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to GDIT's mission and the Tampa program's software engineering team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to support a program with such direct mission impact.
Regards,
