Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Cloud Engineer** at **Helic & Co**. With hands on experience designing, automating, and operating production cloud infrastructure on AWS, I am excited about the opportunity to contribute to **Helic & Co** and support scalable, secure, and reliable cloud environments.

Here are reasons that make me a great fit for the role:

- **Cloud infrastructure design and management:** At Siemens Industry Software, I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and executed 44 production environment upgrades in 4 months across AWS, diagnosing and resolving live infrastructure issues.

- **Infrastructure as code:** I automated AWS resource provisioning with Terraform, reducing deployment time by 30%, and built a Go and Terratest validation framework that caught 95% of misconfigurations before production.

- **Automated deployment pipelines and operational processes:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and automated Teamcenter X infrastructure workflows with Python and Boto3, cutting deployment time by 40%.

- **Security compliance and best practices:** I managed HashiCorp Vault secrets and IAM access policies across production environments, and served as Quality Coach and SonarQube Specialist, increasing automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates.

- **Scripting and cross-team collaboration:** I have hands on experience with Python, Bash, and Go, and collaborated with development teams throughout my roles to troubleshoot infrastructure issues and deliver seamless deployment integration.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Helic & Co**.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build and scale reliable cloud infrastructure with your team.
