Dear Hiring Committee,

I saw the job post on **Lenovo's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **AI Enterprise Engineer** at **Lenovo**. With hands on experience building backend services, REST APIs, cloud platforms, and reliable deployment systems, I am excited about the opportunity to contribute to **Lenovo** and support the **Qira enterprise platform team** in building enterprise capabilities spanning identity, administration, governance, and knowledge retrieval.

Here are reasons that make me a great fit for the role:

- **Professional software engineering experience with high-level languages, APIs, and databases:** At Siemens Industry Software, I built backend automation services in Python (Boto3) integrating with AWS APIs, replacing legacy Ruby scripts and cutting deployment time by 40% across enterprise environments with PostgreSQL and MySQL backed systems.

- **Cloud computing and enterprise platform experience:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, strengthening identity and secrets management, and executed 44 production upgrades in 4 months across AWS, Linux, and enterprise database services.

- **Collaborative software development and operational excellence:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and served as Quality Coach and SonarQube Specialist, increasing automated code coverage from 35% to 78% while mentoring 5 engineers.

- **Exposure to AI applications and LLMs:** In my graduate research, I designed a memory-augmented LLM pipeline using Google Gemini for Android bug reproduction, achieving a 25.7x latency reduction over a published baseline. I also built a 17-tool MCP server exposing structured LLM tool-calling for enterprise data workflows in my PolicyPilot project.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Lenovo's mission of delivering Smarter Technology for All.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the enterprise AI capabilities that let Qira's customers deploy AI securely and at scale.
Regards,
