Dear Hiring Committee,

I saw the job post on **Lucid Motors' careers website** and thought I'd be a good fit for it. I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Data Infrastructure** at **Lucid Motors**. With hands on experience building backend services, data pipelines, and cloud infrastructure with Python and AWS, I am excited about the opportunity to contribute to **Lucid** and support the **ADAS Data Infrastructure** team's work processing large-scale sensor data for autonomous vehicle development.

Here are reasons that make me a great fit for the role:

- **Backend services and data pipelines with Python and AWS:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, while diagnosing live infrastructure issues across Linux, EC2, and databases during 44 production environment upgrades.

- **Distributed systems and large-scale data platforms:** I built an end-to-end data platform for NYC Mobility Forecasting, processing a 2.3M-row transportation dataset across 263 zones through a Spark-based medallion (bronze/silver/gold) pipeline, and serving predictions through a FastAPI backend with PostgreSQL and Redis caching.

- **AWS and Kubernetes deployment experience:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery.

- **ETL design and containerized data processing:** I engineered a 4-stage Python ETL pipeline for a personal analytics platform, processing 71K+ streaming events with custom rate limiting and retry handling, and designed a PostgreSQL analytics schema with materialized views and 16 SQL RPC functions for low-latency queries over large datasets.

- **Ownership and operational excellence:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Lucid's data platform and helping transform vehicle sensor data into usable datasets for autonomous vehicle development.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the data infrastructure that powers Lucid's autonomous vehicle engineering.
Regards,
