Dear Hiring Committee,

I saw the job post on **Microsoft Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Microsoft**. With hands on experience building distributed backend systems, cloud infrastructure automation, and reliable production platforms, I am excited about the opportunity to contribute to **Microsoft** and support the **Azure Storage** team's work on scalable, durable cloud storage.

Here are reasons that make me a great fit for the role:

- **Distributed, scalable systems experience:** At Siemens Industry Software, I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, directly improving scalability and availability of distributed infrastructure serving live production workloads.

- **Durability and reliability under production constraints:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling safe rollback and recovery, and executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases as an on-call responder.

- **Application and service layer development:** I have hands on experience with Java, Python, C/C++, Go, and SQL, building REST APIs, automation frameworks, and backend services. I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy scripts and cutting deployment time by 40% across AWS environments.

- **Mentorship and cross-team collaboration:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% and mentored 5 software engineers on extensible, maintainable coding practices, experience I would bring to collaborating closely with hardware and firmware partners on Azure Archive Storage.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Microsoft's Azure Storage team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the hyperscale storage systems that millions of users rely on daily.
