Dear Hiring Committee,

I saw the job post on **Panasonic Avionics careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **MTS II, Software** at **Panasonic Avionics Corporation**. With hands-on experience building backend automation, distributed infrastructure, and cloud platforms across Go, Python, and AWS, I am excited to contribute to the team building the real-time event logging and streaming systems behind Panasonic's inflight entertainment and connectivity products.

Here are reasons that make me a great fit for the role:

- **Backend systems in Go and distributed infrastructure:** At Siemens Industry Software, I developed a Go and Terratest framework catching 95% of infrastructure misconfigurations pre-production, and automated Teamcenter X infrastructure workflows with Python and REST APIs, cutting deployment time by 40% across AWS environments.

- **Real-time production systems and observability:** I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and distributed databases using CloudWatch log correlation, and designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50% while improving fault tolerance.

- **Cloud-native and containerized systems on AWS:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and have hands-on experience with Docker, Terraform, and AWS services (EC2, S3, SQS, CloudWatch) for building scalable, resilient distributed systems.

- **AI-assisted monitoring and event analysis:** My current graduate research builds a real-time telemetry-analysis pipeline for automated event reproduction, achieving a 25.7x latency reduction over a published baseline, work that directly strengthens my ability to apply AI/ML to intelligent monitoring and anomaly detection.

- **Engineering quality and collaboration:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through code review and structured onboarding.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Panasonic Avionics and helping engineer the real-time systems that bring entertainment and connectivity to passengers worldwide.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the technology that keeps millions of travelers connected and entertained at altitude.

Regards,
