Dear Hiring Committee,

I saw the job post on **Siemens Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Senior Software Engineer** at **Siemens Technology and Services Private Limited**. With hands on experience diagnosing live Linux infrastructure issues, building backend automation, and applying object oriented design across C/C++, Java, and Python, I am excited about the opportunity to contribute to **Siemens Technology and Services** and support the **Foundational Technologies** team in Research and Development.

Here are reasons that make me a great fit for the role:

- **Object oriented programming and analytical problem solving:** My coursework and professional projects are built on object oriented design in Java, Python, and C/C++, including an Android application developed with object oriented principles in Java. At Siemens Industry Software, I applied this analytical approach to diagnose and resolve live production issues.

- **Hands on Linux systems experience:** At Siemens Industry Software, I diagnosed and resolved live infrastructure issues across Linux, EC2, databases, and Teamcenter X services during 44 production environment upgrades completed in 4 months, and automated infrastructure workflows with Python, cutting deployment time by 40% across AWS environments.

- **Problem solving under production constraints:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, strengthening my ability to reason through complex distributed systems issues.

- **Communication and cross functional collaboration:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding, which sharpened my ability to communicate technical decisions clearly across teams.

I am available for full time roles after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Siemens Technology and Services** and its work building resilient, foundational technologies.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help Siemens continue shaping the future of mobility and industrial technology across 200+ countries.
