Dear Hiring Committee,

I saw the job post on **the SIE careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer I, SDK** at **Sony Interactive Entertainment**. With hands on experience writing production C++ and TypeScript, designing SDK style tool APIs, and automating CI/CD across multiple platforms, I am excited about the opportunity to contribute to **Sony Interactive Entertainment** and support the framework and SDKs powering PlayStation experiences.

Here are reasons that make me a great fit for the role:

- **High performance C/C++ and framework development:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and built Go based validation tooling, and my coursework and personal projects include systems level C/C++ development, giving me a strong base for writing high performance framework and SDK code across platforms.

- **JavaScript/TypeScript with modern frameworks:** I built PolicyPilot, a full stack TypeScript application with a React front end and a 17 tool MCP server exposing structured tool calling APIs, applying Zod schema validation at every API boundary so consuming teams and agents integrate against a reliable, well typed SDK surface.

- **Collaborating across teams on SDK requirements and developer experience:** As Quality Coach and SonarQube Specialist at Siemens, I worked with multiple engineering teams to define coding standards and CI/CD quality gates, increasing automated code coverage from 35% to 78%, and mentored 5 software engineers through structured onboarding and technical documentation.

- **CI/CD and multi platform development:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, working daily across Linux and cloud environments while debugging live integration issues.

- **Python and cross platform tooling:** My research and project work rely heavily on Python, including a memory augmented LLM pipeline for Android bug reproduction that achieved a 25.7x latency reduction over a published baseline, reflecting the kind of cross platform (Linux, Android) debugging and tooling experience this role calls for.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Sony Interactive Entertainment's SDK and framework team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the SDKs and developer experience behind the PlayStation platform.
Regards,
