Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **AI Infrastructure Systems Engineer** at **Together AI**. With hands on experience building fleet automation, deployment platforms, and self-healing infrastructure systems in Python and Go, I am excited about the opportunity to contribute to Together AI's mission of building AI infrastructure that runs itself at massive scale.

Here are reasons that make me a great fit for the role:

- **Distributed systems and infrastructure platforms at scale:** At Siemens Industry Software, I built a fleet automation system provisioning, deploying, and retiring 40+ production environments, migrating process-based deployments to Kubernetes via ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault.
- **Automation-first mindset, Python and Go:** I automated infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and built a Go and Terratest validation framework catching 95% of misconfigurations before production.
- **Fleet lifecycle management and Terraform/Ansible automation:** I designed an Ansible-based Blue-Green deployment framework with automated rollback that cut production upgrade downtime by 50%, and automated AWS resource provisioning with Terraform, reducing deployment time by 30%.
- **Root-cause diagnosis and incident triage:** I executed 44 production environment upgrades in 4 months, root-causing live infrastructure failures across Linux, EC2, databases, and services using CloudWatch and Datadog telemetry.
- **AI agents for autonomous operations:** As a graduate researcher, I built an autonomous LLM agent pipeline that diagnoses Android GUI failures from screen recordings and drives automated remediation, achieving a 25.7x latency reduction over a published GPT-4o baseline while preserving diagnosis fidelity.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who is excited by automation-first infrastructure engineering, I am enthusiastic about contributing to Together AI's fleet automation and AI infrastructure agent systems.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the self-healing infrastructure powering one of the world's largest GPU fleets.
