Dear Hiring Committee,

I saw the job post on **Uber's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Machine Learning Engineer** on the **Merchant Intelligence** team at **Uber**. With hands on experience building ML pipelines, RAG systems, and reliable data infrastructure, I am excited about the opportunity to contribute to Uber Eats and support merchant data quality, entity resolution, and the systems that power Sales, Onboarding, Ads, and Feed Optimization.

Here are reasons that make me a great fit for the role:

- **Building and productionizing ML systems on large datasets:** I designed an end-to-end ML system forecasting NYC taxi and rideshare demand across 263 zones from a 2.3M-row hourly dataset, built on a PySpark and Delta Lake medallion pipeline. A two-stage Poisson hurdle model improved forecast MAPE from 18.77% to 16.52% and cut RMSE by 43% over a baseline Random Forest, and I served predictions through a FastAPI backend.

- **Data reconciliation and entity resolution:** In PolicyPilot, I architected an evidence-grounded RAG pipeline over Google Gemini that reconciles conflicting multi-source policy data with citation and version tracing, and designed a 17-tool MCP server for entity extraction, cross-source record comparison, and confidence-scored data-quality triage, directly relevant to merchant data reconciliation at scale.

- **Scalable systems and cloud infrastructure:** At Siemens Industry Software, I automated infrastructure workflows with Python and Boto3, reducing deployment time by 40%, and migrated 40+ production environments to Kubernetes using ArgoCD and Helm, giving me a strong foundation for building ML systems that scale reliably to millions of users.

- **Engineering excellence and mentorship:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding, reflecting the collaboration and mentorship this role calls for.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Uber Eats and helping build the ML foundations that improve merchant data quality for millions of users.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help shape how Uber Eats understands and represents every merchant on its platform.
Regards,
