Dear Hiring Committee,

I saw the job post on **Amazon careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Data Engineer I, Amazon Publisher Monetization, Analytics** at **Amazon**. With over two years of production software engineering experience at Siemens Industry Software and hands on data engineering project work, I am excited about the opportunity to support Amazon Publisher Monetization's mission of building trusted data foundations for advertising supported publishers.

Here are reasons that make me a great fit for the role:

- **Data pipelines and modeling:** In my NYC Mobility Forecasting project, I built a Spark and Delta Lake pipeline that produced a 2.3M row hourly demand dataset from trip, weather, and geospatial data. I also designed a PostgreSQL analytics schema with materialized views, indexes, and 16 SQL RPC functions in my Spotify analytics platform.

- **SQL and Python engineering:** I have hands on experience with Python, SQL, PySpark, pandas, FastAPI, PostgreSQL, and MySQL. At Siemens, I automated Teamcenter X infrastructure workflows with Python and Boto3, reducing deployment time by 40% across AWS environments.

- **Reliability and data quality mindset:** I executed 44 production environment upgrades in four months while troubleshooting Linux, EC2, database, and service issues. I also built Terraform and Go Terratest validation that caught 95% of infrastructure misconfigurations before production.

- **Cloud scale collaboration:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, Amazon EFS, and HashiCorp Vault. As Quality Coach, I increased automated code coverage from 35% to 78% while mentoring 5 engineers on standards and review practices.

I am available for full time after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Amazon** and helping the APM Agentic Insights team deliver reliable, well modeled data products for business decisions.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the data foundations that support Amazon's advertising supported publisher portfolio.
