Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer Back End** at **Distyl**. With hands on experience building backend automation, cloud platforms, Kubernetes deployment systems, and AI workflow tools, I am excited about the opportunity to contribute to **Distyl**'s AI native platform for real enterprise operations.

Here are reasons that make me a great fit for the role:

- **Building and scaling AI infrastructure:** My current research builds a Python LLM automation harness using Gemini, ADB, and uiautomator2, achieving a 25.7x latency reduction across 53 runs on 20+ Android apps versus a published VLM baseline.
- **Cloud backend and Kubernetes experience:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3, reducing deployment time by 40% across AWS environments, then migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, EFS, and Vault.
- **Reliability and production operations:** I executed 44 production upgrades in 4 months, resolved live Linux, EC2, database, and service issues, and designed an Ansible Blue Green deployment framework that reduced production upgrade downtime by 50%.
- **AI systems and platform product thinking:** For PolicyPilot, I architected a citation grounded RAG pipeline over Gemini and designed a 17 tool MCP server for prior authorization extraction, readiness evaluation, and cross payer comparison.

I am available for full time after December 2026. As a Master's student at University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Distyl** and the **Software Engineer Back End** role.

Please find my CV attached below. I look forward to hearing from you. **Distyl's focus on reliable AI systems for critical enterprise workflows closely matches the kind of backend platform work I want to build**.
