Dear Hiring Committee,

I saw the job post on **ENSCO's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Developer** at **ENSCO, Inc.**. With hands on experience building full stack applications, automating AWS cloud infrastructure, and maintaining containerized deployments, I am excited about the opportunity to contribute to ENSCO's mission focused engineering teams.

Here are reasons that make me a great fit for the role:

- **Full-stack development in AWS cloud environments:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, while executing 44 production environment upgrades in 4 months across EC2 and database services.

- **Containerized applications and docker-based workflows:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and built a full stack TypeScript application (React, Node.js, MCP server) containerized with Docker for the PolicyPilot healthcare project.

- **CI/CD pipelines and infrastructure-as-code:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and built a Terraform automation and Go plus Terratest framework that caught 95% of misconfigurations pre-production.

- **Secure development and Agile collaboration:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, while mentoring 5 software engineers through structured onboarding within an Agile Release Train.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to ENSCO's advanced technology solutions for mission critical government and industry systems.

Please find my CV attached below. I look forward to hearing from you. ENSCO's 50-year legacy of applying advanced technology to mission critical challenges is exactly the kind of impactful work I want to build my career around.

Regards,
