Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it. I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer II** at **Microsoft**. With over two years of production software engineering experience at Siemens Industry Software, I have built cloud automation, deployment platforms, and reliable backend systems. Microsoft's mission to empower every person and every organization strongly aligns with the kind of engineering work I want to do.

**Here are reasons that make me a great fit for the role:**

1. I have experience designing and operating reliable cloud services. At Siemens, I automated Teamcenter X infrastructure workflows with Python and Boto3, reducing deployment time by 40% across AWS environments, and executed 44 production environment upgrades in four months while resolving live issues across Linux, EC2, databases, and services.

2. I have worked with modern engineering practices across code quality, deployment, and review readiness. I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, Amazon EFS, and HashiCorp Vault, and designed an Ansible Blue Green deployment framework that reduced production upgrade downtime by 50%.

3. I care about test coverage, reliability, and maintainability. As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and I built a Go and Terratest framework that caught 95% of infrastructure misconfigurations before production.

4. I have hands on AI workflow experience. My current research uses Python, Gemini, Vertex AI, ADB, and uiautomator2 to reproduce Android GUI bugs from video reports, reducing latency by 25.7x against a published ViBR baseline while preserving task completion fidelity.

I am available for full time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Microsoft** and helping build scalable, secure, and reliable cloud services for customers and partners.

Please find my CV attached below. I look forward to hearing from you. I would be grateful for the opportunity to contribute to engineering work that supports Microsoft's cloud services and reaches customers at global scale.

Regards,
