Dear Hiring Committee,

I saw the job post on **the company careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Singular Genomics**. With hands on experience building Python backend automation, CI/CD and build infrastructure, and operational tooling for large production systems, I am excited about the opportunity to contribute to Singular Genomics and support the core software team building and maintaining the sequencing analysis platform.

Here are reasons that make me a great fit for the role:

- **Python development in a large production codebase:** At Siemens Industry Software, I built Python (Boto3) automation replacing legacy Ruby scripts for infrastructure workflows, cutting deployment time by 40% across AWS environments, and worked daily across a large real production codebase with genuine operational requirements.

- **Build configuration, CI/CD, and regression infrastructure:** I owned the migration of 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue Green deployment framework that cut production upgrade downtime by 50% while enabling reliable rollback and recovery.

- **Triage and debugging under time pressure:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure failures across Linux, EC2, databases, and services, building the debugging instincts needed to triage ambiguous pipeline failures reported from the field.

- **Data handling, reliability, and observability:** My NYC Mobility Forecasting project used PySpark and PostgreSQL to process a 2.3M-row dataset end to end, and as Quality Coach and SonarQube Specialist at Siemens I raised automated code coverage from 35% to 78%, closing gaps in testing and documentation across the team.

- **Full-stack and web tooling:** My PolicyPilot project paired a Node.js/Express REST API with a React and TypeScript frontend and a 17-tool MCP server, giving me working comfort in JavaScript and TypeScript alongside Python backend work.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Singular Genomics' mission of empowering researchers and clinicians to advance science and medicine.

Please find my CV attached below. I look forward to hearing from you. Singular Genomics' work pushing sequencing technology into spatial biology is a genuinely exciting problem to help keep running reliably.
