Dear Hiring Committee,

I saw the job post on the **UC applicant portal** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Co-op Student, DTS Office of Information Security** at the **University of Cincinnati**. With hands on production experience managing secrets, access policies, and CI/CD quality gates, I am excited about the opportunity to support the SNOC and contribute to daily security operations, monitoring, and incident response.

Here are reasons that make me a great fit for the role:

- **Monitoring alerts and investigating suspicious activity:** At Siemens Industry Software, I diagnosed and resolved live infrastructure issues across Linux, EC2, databases, and services during 44 production environment upgrades in 4 months, using CloudWatch metrics and Datadog log correlation to identify root causes quickly.

- **Documenting and tracking security incidents:** I managed HashiCorp Vault secrets and IAM access policies across production and non-production environments, strengthening security posture and keeping access changes auditable and well documented.

- **Improving security monitoring and detection tools:** I served as Quality Coach and SonarQube Specialist for the Agile Release Train, increasing automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates that catch issues before they reach production.

- **Updating security documentation, procedures, and playbooks:** I designed an Ansible based Blue-Green deployment framework with automated rollback, reducing production upgrade downtime by 50% and documenting the recovery procedure so any engineer could execute it within 15 minutes.

- **Working with a team on incident response and security projects:** I mentored 5 software engineers through structured onboarding and standardized development practices, and collaborated across teams to migrate 40+ production environments to Kubernetes without service disruption.

I am available for full-time work after my graduation in December 2026, and as a current UC graduate student I am able to meet the co-op enrollment requirement for the term. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to the DTS Office of Information Security.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help strengthen UC's security posture while learning from an experienced SOC team.
Regards,
