Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer II** at **Valon**. With over two years of production software engineering experience at Siemens Industry Software, I have built cloud infrastructure automation, full stack applications, backend workflows, and reliability focused systems across complex production environments.

Here are reasons that make me a great fit for the role:

- **Learning quickly and solving complex problems:** At Siemens, I executed 44 production environment upgrades in four months while diagnosing Linux, EC2, database, and service issues. That work required fast context building across unfamiliar systems and careful execution in live environments.
- **Robust infrastructure for regulated workflows:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, Amazon EFS, and HashiCorp Vault. I also built Terraform and Go Terratest validation that caught 95% of misconfigurations before production.
- **Product minded full stack engineering:** I built a React and MySQL workflow application that digitized departmental record management and improved operating efficiency by 40%. In PolicyPilot, I built a React and Express healthcare platform for structured prior authorization workflows with validated APIs.
- **Quality software at scale:** I automated Teamcenter X workflows with Python and Boto3, cutting deployment time by 40%. As Quality Coach, I increased automated code coverage from 35% to 78% and mentored 5 engineers on standards and reviews.

I am available for full time after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Valon** and helping build reliable software for regulated finance.

Please find my CV attached below. I look forward to hearing from you. I would be excited to contribute to Valon's AI native operating system and help modernize complex financial workflows.
Regards,
