Dear Hiring Committee,

I saw the job post on **Amazon Jobs** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer** at **Amazon EBS**. With hands on experience owning the design, implementation, and operation of large-scale distributed AWS infrastructure, I am excited about the opportunity to contribute to **Amazon EBS** and support the EBS Stats team delivering fleet telemetry and performance insights at petabyte scale.

Here are reasons that make me a great fit for the role:

- **Full software development lifecycle ownership:** At Siemens Industry Software, I owned design and operation of Teamcenter X infrastructure workflows end to end, automating with Python (Boto3) and cutting deployment time 40% across AWS environments, then executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases.

- **Distributed systems design and reliability:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% with reliable rollback, and migrated 40+ production environments from process-based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, building the kind of fault-tolerant operational discipline EBS's storage fleet demands.

- **High-throughput data pipeline experience:** I built a distributed data pipeline with PySpark and Delta Lake processing a 2.3M-row hourly telemetry dataset across 263 zones, and engineered a 4-stage Python ETL pipeline processing 71K+ events with a PostgreSQL analytics schema and materialized views for low-latency queries, directly relevant to ingesting and querying fleet-scale telemetry.

- **Code quality, mentorship, and code review culture:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding, reflecting the collaborative, kind-code-review culture EBS values.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Amazon EBS** and helping deliver reliable, low-latency insights from one of the largest distributed storage systems in the world.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help EBS Stats turn petabyte-scale fleet telemetry into insights that make AWS storage better for millions of customers.

Regards,
