Dear Hiring Committee,

I saw the job post on **Amazon.jobs** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Senior Software Development Engineer, Agentic AI** on Amazon Talent Solutions' Core Science and Engineering team. With production experience building GenAI research pipelines, ML system automation, and reliable cloud infrastructure, I am excited to support the team's work on ML, LLM, and econometric/statistical model deployment for Amazon's talent evaluation systems.

Here are reasons that make me a great fit for the role:

- **ML lifecycle management and LLM response quality:** As a Graduate Researcher, I designed a two stage memory-augmented LLM pipeline for Android bug reproduction, benchmarking against a GPT-4o + GroundingDINO + CLIP baseline and cutting latency 25.7x across 53 evaluation runs, direct hands-on work with model evaluation, debugging, and analysis techniques.

- **RAG and prompt engineering for GenAI applications:** I architected an evidence-grounded RAG pipeline over Gemini 2.5-flash for PolicyPilot, a medical policy intelligence portal, enforcing citation-backed answers to eliminate hallucination in high-stakes eligibility decisions, and designed a 17-tool MCP server exposing structured LLM tool-calling to external AI agents.

- **Scalable systems and distributed data handling:** I built an ML forecasting system with PySpark and Delta Lake processing a 2.3M-row hourly dataset across 263 zones, and at Siemens Industry Software I automated Teamcenter X infrastructure workflows with Python and Boto3, cutting deployment time 40% across AWS environments.

- **Full software development lifecycle and mentorship:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding, experience directly relevant to leading design and driving engineering excellence.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Amazon Talent Solutions and helping shape how agentic AI supports hiring and development across Amazon's businesses.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the systems that connect rigorous science with Amazon's talent decisions at global scale.
