Dear Hiring Committee,

I saw the job post on **the CVS Health careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Search and Personalization** at **CVS Health**. With hands on experience building microservices, distributed systems, cloud native infrastructure, and AI enabled decision support tools, I am excited about the opportunity to contribute to **CVS Health** and support the team building intelligent search and personalization experiences across the platform.

Here are reasons that make me a great fit for the role:

- **Cloud native microservices on AWS/GCP:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD.

- **Distributed systems with scalability and resiliency:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and executed 44 production environment upgrades in 4 months while diagnosing live infrastructure issues across Linux, EC2, and databases.

- **AI driven search and decision support:** In my graduate research, I built a memory augmented LLM pipeline for Android bug reproduction, achieving a 25.7x latency reduction over a published GPT-4o baseline. In my PolicyPilot project, I architected an evidence grounded RAG pipeline over Google Gemini with a 17-tool MCP server for intelligent search, extraction, and comparison across healthcare policy documents.

- **CI/CD, DevOps, and quality practices:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **CVS Health** and helping build a more connected, personalized health experience for every individual.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help shape the search and personalization systems that make health care simpler and more accessible for millions of people.

Regards,
