Dear Hiring Committee,

I saw the job post on **CaseGuard's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Backend** at **CaseGuard**. With hands on experience designing REST APIs, modeling business logic into relational databases, and building cloud infrastructure with Infrastructure as Code on AWS, I am excited about the opportunity to contribute to CaseGuard and support the team building CaseGuard Studio's redaction and file-processing platform.

Here are reasons that make me a great fit for the role:

- **REST API design and relational data modeling:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3, and independently diagnosed live infrastructure issues across Linux, EC2, and production databases during 44 environment upgrades in 4 months, work I owned largely on my own with minimal oversight.

- **Infrastructure as Code on AWS:** I automated provisioning of AWS resources with Terraform, cutting deployment time by 30%, and later migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, giving me hands on experience designing cloud infrastructure end to end.

- **Databases and caching for large-scale processing:** In my NYC Mobility Forecasting project, I built a RESTful API in FastAPI backed by PostgreSQL and Redis caching to serve real-time predictions over a 2.3 million row dataset, processing large volumes of data efficiently under throughput constraints.

- **Independent ownership of complex, underspecified problems:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% by designing and enforcing quality gates across teams, and in my PolicyPilot project I designed 17 structured tool APIs with schema validation at every data boundary to model complex multi-payer business logic.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to CaseGuard's mission of building reliable, easy-to-use redaction software for law enforcement and public sector agencies.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my backend and cloud infrastructure experience to a product that has such meaningful real-world impact.
