Dear Hiring Committee,

I saw the job post on the Topstep careers site and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Topstep**. With hands on experience owning production services end to end, building REST APIs, and operating cloud infrastructure under real production load, I am excited about the opportunity to contribute to **Topstep** and support the systems that power real-time trading and brokerage integrations for thousands of active traders.

Here are reasons that make me a great fit for the role:

- **Production service ownership:** At Siemens Industry Software, I owned Teamcenter X infrastructure workflows end to end, automating them with Python and REST integrations and cutting deployment time 40% across AWS environments. I also handled 44 production environment upgrades in 4 months, debugging live incidents across Linux, EC2, and databases with on-call style ownership.

- **Reliability and incident response:** I designed an Ansible based Blue-Green deployment framework with automated rollback that cut production upgrade downtime by 50% and enabled full recovery within 15 minutes, and I instrumented services with CloudWatch metrics and Datadog log correlation to diagnose issues faster.

- **Testing and code quality:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I raised automated test coverage from 35% to 78% by enforcing testing standards and running code reviews, which is the same discipline I would bring to writing clean, well tested code on your platform team.

- **Full stack and API design range:** I have hands on experience with Java, Python, SQL, React, and TypeScript, having built RESTful APIs, relational schema designs, and full stack production applications, including a FastAPI service backed by PostgreSQL and Redis and a full stack TypeScript app with Zod schema validation at every API boundary.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Topstep and helping raise the engineering bar on a platform traders depend on with real money on the line.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the reliable, high-throughput systems behind Topstep's trading platform.
Regards,
