Dear Hiring Committee,

I saw the job post on the Amazon careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Dev Engineer II (SDE2)** at **Amazon Connect**. With hands on experience designing and operating production cloud systems, owning code end to end from design through deployment, I am excited about the opportunity to contribute to **Amazon Connect** and help build the next generation cloud contact center.

Here are reasons that make me a great fit for the role:

- **Professional software development experience:** At Siemens Industry Software, I spent two years designing and automating Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy scripts and cutting deployment time by 40% across AWS environments, giving me solid grounding in production-grade software development.

- **Design and architecture of scalable systems:** I designed an Ansible based Blue-Green deployment architecture that reduced production upgrade downtime by 50%, and led the migration of 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, directly applying design patterns for reliability and scale.

- **Full software development lifecycle ownership:** As Quality Coach and SonarQube Specialist, I enforced coding standards and code review practices that raised automated code coverage from 35% to 78%, while also owning source control workflows, build pipelines, testing, and live operations across 44 production environment upgrades.

- **Programming and systems breadth:** I have hands on experience with Java, Python, JavaScript, TypeScript, SQL, and Go, building backend services, REST APIs, and distributed systems, including a current research project building an LLM-driven automation pipeline with a 25.7x latency improvement over a published baseline.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Amazon Connect.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build a contact center platform that shapes how millions of customers experience service every day.
