Dear Hiring Committee,

I saw the job post on **Amazon Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer** at **Amazon Data Services, on the EC2 VPC team**. With hands on experience building backend automation, distributed infrastructure, and reliable deployment systems, I am excited about the opportunity to contribute to **Amazon** and support the **EC2 VPC control plane that powers networking for every EC2 instance**.

Here are reasons that make me a great fit for the role:

- **Server-side APIs and distributed systems experience:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments. I also executed 44 production environment upgrades in 4 months, root-causing live infrastructure issues across Linux, EC2, databases, and distributed services.

- **Owning services end to end and improving availability:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, directly improving deployment safety and rollback reliability.

- **Programming across Java and automation tooling:** I have hands on experience with Java, Python, Go, and Ruby, and have built backend services, REST APIs, and infrastructure automation tooling supporting deployment safety and fleet operations, closely matching the languages and workflows this role uses daily.

- **Mentoring and quality culture:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured design and code reviews.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Amazon's EC2 VPC team and the highly-available, horizontally-scalable services that power the AWS network.

Please find my CV attached below. I look forward to hearing from you. I would be excited to contribute to a team that keeps the cloud running for millions of customers worldwide.
