Dear Hiring Committee,

I saw the job post on **Amazon careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer, AWS OpenSearch** at **Amazon**. With over two years of production software engineering experience at Siemens Industry Software, I have built cloud infrastructure automation, deployment platforms, backend workflows, and reliability focused systems across AWS and Kubernetes environments.

Here are reasons that make me a great fit for the role:

- **Distributed cloud systems:** At Siemens, I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, Amazon EFS, and HashiCorp Vault, giving me hands on experience with cloud native systems that must remain reliable across many environments.
- **High availability and operations:** I executed 44 production environment upgrades in four months while debugging Linux, EC2, database, and service issues. I also designed an Ansible Blue Green deployment framework that reduced production upgrade downtime by 50%.
- **Strong coding and testing habits:** I have hands on experience with Java, Rust, Python, Go, SQL, REST APIs, AWS, Docker, Kubernetes, and Terraform. As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 engineers on coding standards.
- **Data ingestion, search, and AI systems:** My projects include a Spark and Delta Lake pipeline over 2.3M hourly rows, a FastAPI prediction service with PostgreSQL and Redis, and a citation backed RAG system with a 17 tool MCP server for structured search and comparison.

I am available for full time after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Amazon** and helping build reliable distributed services for **AWS OpenSearch**.

Please find my CV attached below. I look forward to hearing from you. I would be excited to contribute to a team building search, observability, and data infrastructure used by customers at AWS scale.
