Dear Hiring Committee,

I saw the job post on **Apple's careers site** and thought I'd be a great fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Machine Learning Engineer** on the **Machine Intelligence Neural Design (MIND)** team at **Apple**. With hands on experience building ML training and evaluation pipelines, production inference infrastructure, and full stack applications, I am excited about the opportunity to help ship ML based features and contribute to Apple's foundation model and perception research.

Here are reasons that make me a great fit for the role:

- **Strong foundation in LLM and multimodal foundation models:** As a Graduate Researcher, I designed a two stage memory augmented LLM pipeline that decouples multimodal video understanding from real time device sensing and automation for Android GUI bug reproduction, evaluated against a published GPT-4o and CLIP based baseline across 53 runs on 20+ apps, achieving a 25.7x latency reduction.

- **Experience building ML training and eval pipelines in Python:** I built a staged, config driven experimental harness for reproducible evaluation runs, and used a provider agnostic LLM abstraction across Gemini, GPT-4o, Llama, and Qwen to isolate method effects from model choice, a workflow directly aligned with the dataset curation, model training, and evaluation pipeline this role calls for.

- **Production software and prototyping experience:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python, reducing deployment time by 40%, and migrated 40+ production environments to Kubernetes. I have also built real time device automation harnesses and end to end demos, including a stall detection and history windowed decision loop for on device evaluation runs.

- **Cross functional collaboration and communication:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding, strengthening my ability to represent technical work across research, software, and operations teams.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Apple's MIND team and the end to end ML pipeline behind Apple's user facing features.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help bring cutting edge foundation model and perception research to production for millions of Apple users.
Regards,
