Dear Hiring Committee,

I saw the job post on **Apple's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **DevOps Engineer** on the **G&A Solutions Engineering (GSE)** team at **Apple**. With hands on experience building CI/CD pipelines, Infrastructure as Code, and Kubernetes based deployment platforms, I am excited about the opportunity to help build tooling that enables software releases across Apple's internal systems.

**Here are reasons that make me a great fit for the role:**

- **Building and managing tools that enable software releases:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and executed 44 production environment upgrades in 4 months.

- **Programming and IaC/CI/CD tooling:** I have hands on experience with Python, Java, Go, and Shell, and built infrastructure automation with Terraform, provisioning AWS resources and reducing deployment time by 30%. I also designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%.

- **Cloud and container experience:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, working across AWS EC2, IAM, and VPC to modernize deployment architecture.

- **Integrating GenAI tooling into engineering workflows:** As a Graduate Researcher, I designed a two stage memory augmented LLM pipeline using Gemini and Vertex AI for Android bug reproduction, and built a 17-tool MCP server exposing structured LLM tool-calling for automated evaluation workflows on the PolicyPilot project.

- **Self-driven learning and cross-functional collaboration:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Apple's GSE team and the systems that keep Apple's engineers shipping fast and reliably.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the tools that let Apple's developers focus on crafting great experiences for customers.
