Dear Hiring Committee,

I saw the job post on **Amazon Jobs** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer** on the **Playback Team** at **Audible**. With hands on experience building distributed backend systems, production infrastructure automation, and ML driven services, I am excited about the opportunity to contribute to Audible and support the Playback team's work on optimizing playback quality, performance, and customer experience across platforms.

Here are reasons that make me a great fit for the role:

- **Production software development and testing:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, while writing and testing scalable, maintainable code as part of an agile engineering team.

- **Collaborating with stakeholders on customer centric solutions:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live issues across distributed, multi tiered systems spanning Linux, EC2, and databases, working closely with cross functional teams to keep customer facing services reliable.

- **Data structures, algorithms, and object oriented design:** I hold a Master's focus in Advanced Algorithms and Deep Learning, and in my graduate research I designed a two stage memory augmented LLM pipeline that achieved a 25.7x latency reduction over a published baseline, applying algorithmic optimization to a performance critical automation problem.

- **Code quality, mentorship, and continuous improvement:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% through code reviews and enforced quality gates, and mentored 5 software engineers through structured onboarding.

- **Cloud platforms and distributed systems:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Audible's mission of advancing audio storytelling.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help the Playback team push the state of internet audio forward for millions of listeners.
Regards,
