Dear Hiring Committee,

I saw the job post on the **Brivo careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, New Grad** at **Brivo**. With hands on experience building backend services, cloud infrastructure, and full stack applications, I am excited about the opportunity to contribute to Brivo and Eagle Eye Networks' next-generation security platform.

Here are reasons that make me a great fit for the role:

- **Working knowledge of Python, Java, and Node.js/TypeScript:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), and across my projects I have built backend services and REST APIs with Java, Node.js, TypeScript, FastAPI, and Express, reducing deployment time by 40 percent through automation.

- **Databases and SQL:** I designed a PostgreSQL analytics schema with materialized views, composite indexes, and 16 SQL RPC functions for my Spotify analytics platform, and built a PySpark-based pipeline over a 2.3 million row dataset, giving me strong hands on experience writing and optimizing SQL against production scale data.

- **Linux, shell, and Git:** I diagnosed and resolved live production infrastructure issues across 44 environment upgrades on Linux and EC2, and used Git and GitLab CI/CD daily to manage and deploy 40+ production environments, comfort that translates directly to Brivo's fast paced, weekly deployment cadence.

- **Building with AI to prototype and iterate quickly:** As a graduate researcher, I designed a memory-augmented LLM pipeline using Google Gemini and Vertex AI for Android bug reproduction, achieving a 25.7x latency reduction over a published baseline, experience that reflects the AI-native, rapid-iteration approach Brivo is looking for.

- **Cloud platforms and containerized deployment:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and Docker, and designed an Ansible-based Blue-Green deployment framework that cut production upgrade downtime by 50 percent while enabling reliable rollback.

I am available to work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Brivo's Engineering organization and learning from experienced mentors on the Video or Access team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the platform powering the future of AI-driven physical security.
