Dear Hiring Committee,

I saw the job post on **Cranial Technologies' careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Site Reliability Software Engineer** at **Cranial Technologies**. With hands on experience operating business critical production systems, building automation and CI/CD pipelines, and troubleshooting live infrastructure across cloud environments, I am excited about the opportunity to contribute to **Cranial Technologies** and help keep systems that support patient care stable, secure, and available.

Here are reasons that make me a great fit for the role:

- **Supporting business critical production systems:** At Siemens Industry Software, I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and services without service interruption, direct experience keeping production applications stable and available.

- **Automation and CI/CD to reduce manual work:** I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40%, and built GitOps based CI/CD pipelines with GitLab CI/CD and ArgoCD, reducing manual operational work while enabling reliable, repeatable deployments.

- **Monitoring, incident response, and root cause troubleshooting:** I diagnosed live production infrastructure issues using CloudWatch metrics and Datadog log correlation, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback within 15 minutes, experience aligned with your focus on monitoring, alerting, and post-incident remediation.

- **Scripting, databases, and cross-team collaboration:** I have hands on experience with Python and Bash automation, PostgreSQL and MySQL, and managed HashiCorp Vault secrets and IAM access policies to strengthen security posture, and as Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% while partnering across engineering teams on documentation and quality standards.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values reliable, well documented systems, I am enthusiastic about contributing to Cranial Technologies' mission of supporting the clinical and operational teams who directly impact patient care.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the automation and observability that keeps Cranial Technologies' patient facing systems reliable.
