Dear Hiring Committee,

I saw the job post on **Google Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Early Career** at **Google**. With hands on experience building backend automation, distributed cloud infrastructure, and reliable deployment systems, I am excited about the opportunity to contribute to Google and support engineering teams building large-scale systems used by billions.

Here are reasons that make me a great fit for the role:

- **Data structures and algorithms coursework and applied research:** My graduate coursework in Advanced Algorithms and Database Theory grounds my day to day engineering, and my current research designs a two-stage memory-augmented LLM pipeline for Android bug reproduction, achieving a 25.7x latency reduction over a published baseline across 53 evaluation runs.

- **Production software development across multiple languages:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, while also writing Go and Java across other production systems.

- **Hands on experience with AI productivity tools:** I use Google Gemini and Vertex AI in both my graduate research and personal projects, including an evidence-grounded RAG pipeline over Gemini 2.5-flash for a healthcare eligibility portal, to streamline development and reduce manual engineering effort.

- **Distributed and large-scale systems experience:** I migrated 40+ production environments from process-based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50%.

- **Collaboration and engineering quality ownership:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding, reflecting the versatility and follow-through Google's engineering teams value.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Google's engineering culture and the technologies that connect billions of users.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the next generation of technology that shapes how people around the world connect and explore information.
