Dear Hiring Committee,

I saw the job post on the **HeroDevs** careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **Associate Software Engineer - Integrations** at **HeroDevs**. With hands on experience automating infrastructure workflows, building REST APIs, and running CI/CD pipelines in production, I am excited about the opportunity to contribute to the Shared Services team and the pipelines that deliver data and secure package releases to your integration partners.

Here are reasons that make me a great fit for the role:

- **Building and maintaining automated data delivery jobs:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and reducing deployment time by 40% across AWS environments. I also engineered a 4-stage Python ETL pipeline processing 71K+ streaming events with custom rate limiting and retry handling, similar to the reliability integration jobs require.

- **Working with REST APIs and internal data sources:** I built a full-stack TypeScript app with a Node.js/Express REST API and a 17-tool MCP server for my PolicyPilot project, using Zod schema validation at every data boundary to keep retrieved and transformed data correct.

- **Scripting in JavaScript/TypeScript, Node.js, and Python:** My programming background spans Java, Python, JavaScript, TypeScript, and SQL, and I have shipped small services and automation scripts in each across my internships, full-time role, and personal projects.

- **CI/CD workflows and monitoring:** I designed GitOps-based CI/CD pipelines with GitLab CI/CD and ArgoCD at Siemens, and served as Quality Coach and SonarQube Specialist, increasing automated code coverage from 35% to 78% and enforcing quality gates that surfaced failures quickly.

- **Debugging and troubleshooting integration issues:** I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases, and built a self-service platform adopted by 15 engineers to speed up triage and recovery.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values careful, well-tested automation, I am enthusiastic about contributing to HeroDevs' Shared Services team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the pipelines that keep secure open-source releases flowing reliably to your partners.
Regards,
