Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **Associate Software Engineer** at **Lyft**. With hands on experience building backend services, distributed systems, and cloud infrastructure at scale, I am excited about the opportunity to contribute to Lyft's core products and transportation platform.

Here are reasons that make me a great fit for the role:

- **Partnering across teams to build production software:** At Siemens Industry Software, I worked directly with infrastructure, security, and quality teams to automate Teamcenter X workflows with Python and Boto3, replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments.

- **Proficiency in Python and Go:** I automated AWS resource provisioning with Terraform and built a Go plus Terratest testing framework that caught 95% of misconfigurations before production, alongside daily Python development for infrastructure automation.

- **Designing and developing software components, services, and APIs at scale:** I migrated 40+ production environments from process based deployments to a Kubernetes microservices architecture using ArgoCD, Helm, and GitLab CI/CD, and executed 44 production environment upgrades in 4 months while diagnosing live infrastructure issues.

- **Strong software engineering fundamentals and testing:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, building on coursework in advanced algorithms and data structures.

- **Evaluating systems against reliability and performance goals:** My graduate research benchmarks a memory-augmented LLM pipeline against a published baseline across 53 runs, achieving a 25.7x latency reduction while preserving task-completion fidelity.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Lyft's mission of serving and connecting people through reliable transportation software.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the services that power millions of rides every day.
