Dear Hiring Committee,

I saw the job post on the **Midmark** careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Midmark**. With hands on experience building full stack applications, cloud and containerized infrastructure, and DevOps automation pipelines, I am excited about the opportunity to contribute to Midmark's software solutions across the medical, dental, and animal health environments.

Here are reasons that make me a great fit for the role:

- **Full-stack, multi-discipline software development:** At Siemens Industry Software, I designed and shipped backend automation with Python and Boto3, cutting deployment time by 40%, and built full stack React and MySQL applications, giving me hands on experience spanning UI, API, and backend disciplines.

- **Containerization and cloud/hybrid systems:** I migrated 40+ production environments from process-based deployments to containerized Kubernetes services using ArgoCD, Helm, and GitLab CI/CD, applying cloud-native design patterns across AWS environments.

- **DevOps execution and automated testing pipelines:** I designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and served as Quality Coach and SonarQube Specialist, increasing automated code coverage from 35% to 78% through structured testing practices in the CI/CD pipeline.

- **Technical leadership and Agile delivery:** I mentored 5 software engineers through structured onboarding while working within Agile/Scrum teams, and executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues independently and collaboratively.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Midmark's mission of transforming healthcare experiences through technology.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build software that improves the point-of-care experience for caregivers and patients.

Regards,
