Dear Hiring Committee,

I saw the job post on the **Notion** careers site and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, New Grad** at **Notion**. With hands on experience building web applications, backend services, and reliable deployment systems, I am excited about the opportunity to contribute to **Notion** and support the team building the collaborative AI workspace millions of people rely on.

Here are reasons that make me a great fit for the role:

- **Full-stack web application experience:** I built PolicyPilot, a full-stack TypeScript application with a React frontend and Express/Node.js backend, including a 17-tool MCP server with Zod schema validation at every data boundary. I also built a React and MySQL workflow application for the Government of Maharashtra that digitized departmental record management and improved operational efficiency by 40%.

- **Familiarity with backend systems and databases:** On the Spotify Personal Analytics Platform, I designed a PostgreSQL analytics schema with materialized views and 16 SQL RPC functions, and built a FastAPI backend serving low-latency queries over 71,000+ streaming events, giving me hands on experience connecting the data model to the user interface.

- **Pragmatic use of AI-assisted development:** In my current graduate research, I designed a memory-augmented LLM pipeline for Android bug reproduction using Gemini and Vertex AI, achieving a 25.7x latency reduction over a published baseline. I regularly use AI-assisted development tools like Claude Code in my own workflow to move faster while staying focused on the problem I am solving.

- **Production engineering and reliability mindset:** At Siemens Industry Software, I automated infrastructure workflows with Python and Boto3, cutting deployment time by 40%, and executed 44 production environment upgrades in 4 months while diagnosing live issues across Linux, EC2, and Kubernetes services. As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 engineers.

I am available to start full time after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Notion's mission of making work faster, clearer, and less fragmented.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build tools that let humans and AI agents think and work together at Notion.
