Dear Hiring Committee,

I saw the job post on **OPPO's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Backend Engineer, Generative AI Services** at **OPPO US Research Center**. With hands on experience building backend automation, full stack applications, cloud platforms, and reliable deployment systems, I am excited about the opportunity to contribute to **OPPO** and support the team bringing generative AI capabilities directly to Android users.

Here are reasons that make me a great fit for the role:

- **Python backend APIs for generative AI features:** My current graduate research builds a memory-augmented LLM pipeline in Python using Google Gemini 2.5 Pro and Vertex AI, achieving a 25.7x latency reduction over a published GPT-4o baseline while preserving task accuracy across 20+ Android apps, direct experience integrating generative AI APIs into production-facing workflows.

- **Cloud platform experience (GCP, Azure, AWS):** At Siemens Industry Software, I automated infrastructure workflows with Python (Boto3) across AWS, cutting deployment time by 40%, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, hands on experience with cloud platforms and containerized deployment that translates directly to GCP and Azure environments.

- **Distributed systems and production reliability:** I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, experience directly applicable to building fault tolerant, highly available API services.

- **Code quality, testing, and cross-team collaboration:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing testing and CI/CD quality gates, and mentored 5 software engineers, skills aligned with your emphasis on unit, integration, and E2E testing alongside close collaboration with ML and mobile teams.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who enjoys building reliable backend systems for AI powered applications, I am excited about the opportunity to contribute to OPPO's mission of bringing generative AI directly to mobile users.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the backend services that define how millions of Android users interact with generative AI on their phones.
Regards,
