Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Forward Deployed Software Engineer, Warehouse Innovation** at **Procter & Gamble**. With hands on experience building Python backend services, React full stack applications, and Kubernetes based deployment platforms, I am excited about the opportunity to contribute to **Procter & Gamble** and support the Warehouse Execution System initiative.

Here are reasons that make me a great fit for the role:

- **Python backend development:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy Ruby scripts and cutting deployment time by 40 percent across AWS environments, giving me strong footing in writing production quality backend services.

- **React/Vue frontend and full stack delivery:** I built PolicyPilot, a full stack TypeScript application pairing a React interface with a Node and Express REST API, and a 17 tool MCP server for structured AI tool calling, showing I can design data models, APIs, and interfaces end to end.

- **Kubernetes and containerized deployment:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue Green deployment framework that reduced production upgrade downtime by 50 percent.

- **Algorithm design for operational problems:** For my NYC Mobility Forecasting project, I designed a two stage Poisson hurdle model predicting demand across 263 zones from a 2.3 million row dataset, improving forecast accuracy and cutting RMSE by 43 percent, experience directly relevant to volume forecasting and routing problems.

- **AI assisted development and stakeholder communication:** My current graduate research uses Gemini and Vertex AI in a memory augmented LLM pipeline that achieved a 25.7x latency reduction, and as Quality Coach at Siemens I regularly translated engineering process gaps into scoped fixes while mentoring 5 engineers.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Procter & Gamble's warehouse innovation efforts.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build systems that every product shipped in North America passes through.
