Dear Hiring Committee,

I saw the job post on the **Rivian and Volkswagen Group Technologies** careers site and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer II, Streaming** at **Rivian and Volkswagen Group Technologies**. With hands on experience building distributed cloud infrastructure, automated deployment platforms, and data pipelines, I am excited about the opportunity to contribute to the Data Platform Streaming team and the real-time infrastructure powering vehicle telemetry and connected services.

Here are reasons that make me a great fit for the role:

- **Distributed, fault tolerant systems in production:** At Siemens Industry Software, I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery.

- **Production operations and troubleshooting at scale:** I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases using CloudWatch and Datadog dashboards for monitoring and alerting.

- **Data pipeline and streaming-adjacent engineering:** I built a distributed ML pipeline forecasting NYC taxi and rideshare demand across 263 zones using a Spark based medallion (bronze/silver/gold) architecture over a 2.3M-row hourly dataset, and served real-time predictions through a FastAPI service with Redis caching.

- **Cloud native application development:** I have hands on experience with Java, Python, Go, AWS, Docker, Kubernetes, and Terraform, and have built REST APIs, ETL pipelines, and production ready services following strong software engineering practices.

- **Engineering quality and collaboration:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Rivian and Volkswagen Group Technologies and helping build the real-time data platform behind the next generation of software-defined vehicles.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the streaming infrastructure that connects vehicle telemetry, analytics, and intelligent in-vehicle experiences.
Regards,
