Dear Hiring Committee,

I saw the job post on **Stripe's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Backend Engineer** on the **Link** team at **Stripe**. With hands on experience building backend services, financial infrastructure automation, and reliable cloud deployment systems, I am excited about the opportunity to contribute to **Stripe** and support Link's mission of building delightful, low-latency payment experiences for a global consumer base.

Here are reasons that make me a great fit for the role:

- **Backend engineering across the stack:** At Siemens Industry Software, I automated Teamcenter X backend infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, while building REST APIs and services in Java, Python, and Go.

- **Debugging critical production issues:** I diagnosed and resolved issues across 44 production environment upgrades in 4 months, working across Linux, EC2, databases, and multiple service layers to keep live systems healthy under time pressure.

- **Mentoring and cross-team collaboration:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding, while collaborating across teams to modernize CI/CD tooling and standards.

- **Financial tracking and cloud services:** I reduced monthly AWS cloud spend 40% (from $15K to $9K) through EC2 rightsizing and automated cost cleanup, and built a FastAPI backend serving real time predictions over PostgreSQL and Redis for a large scale forecasting system.

- **Enthusiasm for agentic AI workflows:** In my graduate research, I designed an agentic two stage LLM pipeline for Android bug reproduction that achieved a 25.7x latency reduction over a published baseline, and built a 17 tool MCP server exposing structured LLM tool calling for external agents.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Stripe** and helping the Link team build secure, low-latency payment infrastructure at global scale.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the next generation of Stripe products that make payments effortless for millions of consumers.
