Dear Hiring Committee,

I saw the job post on **Uber careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer I** at **Uber**. With hands on experience building backend automation, distributed cloud infrastructure, and reliable production systems, I am excited about the opportunity to contribute to **Uber** and support the platforms and services that power movement in thousands of cities worldwide.

Here are reasons that make me a great fit for the role:

- **Backend development in Python with distributed, large-scale systems:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across large-scale distributed AWS environments serving production traffic.

- **Debugging and monitoring production services:** I executed 44 production environment upgrades in 4 months, debugging and monitoring live infrastructure issues across Linux, EC2, databases, and Teamcenter X services to resolve reliability problems without service interruption.

- **Designing scalable, resilient systems and APIs:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, Docker, and GitLab CI/CD, building and integrating REST APIs along the way.

- **Collaboration across teams and SDLC ownership:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% and mentored 5 software engineers, collaborating closely with engineering peers throughout the software development lifecycle.

- **Object-oriented design, data structures, and algorithms:** My graduate research and personal projects, including a two-stage ML forecasting system and a FastAPI backend serving real-time predictions, reflect hands on application of algorithm design and complexity analysis to build resilient software systems.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Uber's engineering culture and helping build systems that move the world forward.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the platforms that power safe, affordable, and reliable movement for millions of people every day.
