Dear Hiring Committee,

I saw the job post on **Apple Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Data Engineer** at **Apple**. With hands on experience building backend automation, cloud microservices, and data pipelines, I am excited about the opportunity to contribute to **Apple's Analytics Platforms & Experiences (APX)** team and support the Data Engineering Platform that powers analytics across Apple's services.

Here are reasons that make me a great fit for the role:

- **Building scalable backend services with big data technologies:** On my NYC Mobility Forecasting project, I built a batch data pipeline processing a 2.3M-row hourly dataset with PySpark and Delta Lake, and designed a two-stage model that improved forecast accuracy (MAPE 18.77% to 16.52%) and cut RMSE by 43%, giving me hands on experience integrating big data technologies with backend services.

- **Designing and building backend services and APIs:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy Ruby scripts and reducing deployment time by 40% across AWS environments, while executing 44 production environment upgrades in 4 months.

- **Distributed systems and microservices at scale:** I migrated 40+ production environments from process based deployments to Kubernetes microservices using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%.

- **Exposure to AI-driven development and developer tooling:** My graduate research uses Gemini and Vertex AI to build a memory-augmented LLM pipeline for Android bug reproduction, achieving a 25.7x latency reduction, reflecting my genuine enthusiasm for applying AI tools to improve engineering productivity.

- **Collaboration and ownership:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% and mentored 5 software engineers through structured onboarding, strengthening my ability to work across teams and communicate technical concepts clearly.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Apple's Data Engineering Platform team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the platform capabilities that teams across Apple rely on every day.

Regards,
